

# Software Reengineering Course

## Intermediate Report Evaluation

- Delivery:  On-time  Late: X days
- Use at least one tool/script that is related to each lab sessions:
  - Metrics and Visualisation: CodeScene
  - Duplicated code: iClones, Dude
  - Refactoring Assistants: CodeScene, SonarQube
  - Test Coverage: IntelliJ Coverage, JaCoCo, Little Darwin
  - Mining Repositories:
- Screenshots of tool reports available for the relevant ones of the above
  - Yes
  - Some are missing:
- Reflection on the effectiveness of the tools for the current reengineering project
  - Yes
  - Reflection is missing for:
- (Optional) Reference to extra tools not covered in the lab:
- Capable of running the tool before / after / during the reengineering project to assess improvement
  - No
  - Not explicitly mentioned: test coverage / metrics / visualisation
  - Explicitly mentioned: test coverage / metrics / visualisation
- (Optional) UML class diagrams to explain planned structural changes / refactoring:
- Report
  - Structure:
  - Lay-out:
  - Spelling & Grammar:
  - Actionable:
- Reference to exact URL (GitHub project) of reengineering project available
  - Yes: ...
  - Not yet: ...
- Sound basis for the remainder of the project
  - References to reengineering patterns.
  - Ad-hoc vs. Systematic approach:
  - Plan (& Estimates) is present:
  - Success criteria ("definition of done"):
